This New York for Affordable Energy/Siena College Poll was conducted February 5 - 9, 2023, among 897 New York State residents. Telephone calls were conducted in English and respondent sampling was initiated by asking for the youngest person in the household. Telephone sampling was conducted via a stratified dual frame probability sample of landline and cell phone telephone numbers weighted to reflect known population patterns. The landline telephone sample was obtaied from ASDE and the cell phone sample was obtained from Dynata. Data from collection modes was statistically adjusted by age, region, race/ethnicity, education, and gender to ensure representativeness. It has an overall margin of error of +/- 3.7 percentage points including the design effects resulting from weighting.

There was an oversample of western New York residents in Erie and Niagara counties (a sub-sample of 100) which has a margin of error of +/- 9.8 percentage points including the design effects resulting from weighting. The respondents from this sub-sample of western New York residents were weighted in the New York State data to be representative of their statewide proportion.

The Siena College Research Institute, directed by Donald Levy, Ph.D., conducts political, economic, social, and cultural research primarily in NYS. SCRI, an independent, non-partisan research institute, subscribes to the American Association of Public Opinion Research Code of Professional Ethics and Practices.

For more information or comments, please call Dr. Don Levy at 518-783-2901.
